

Updating the Models

Here are the Models from Exercise 2.3:

Users
name
username
bio
email
password
profile_picture

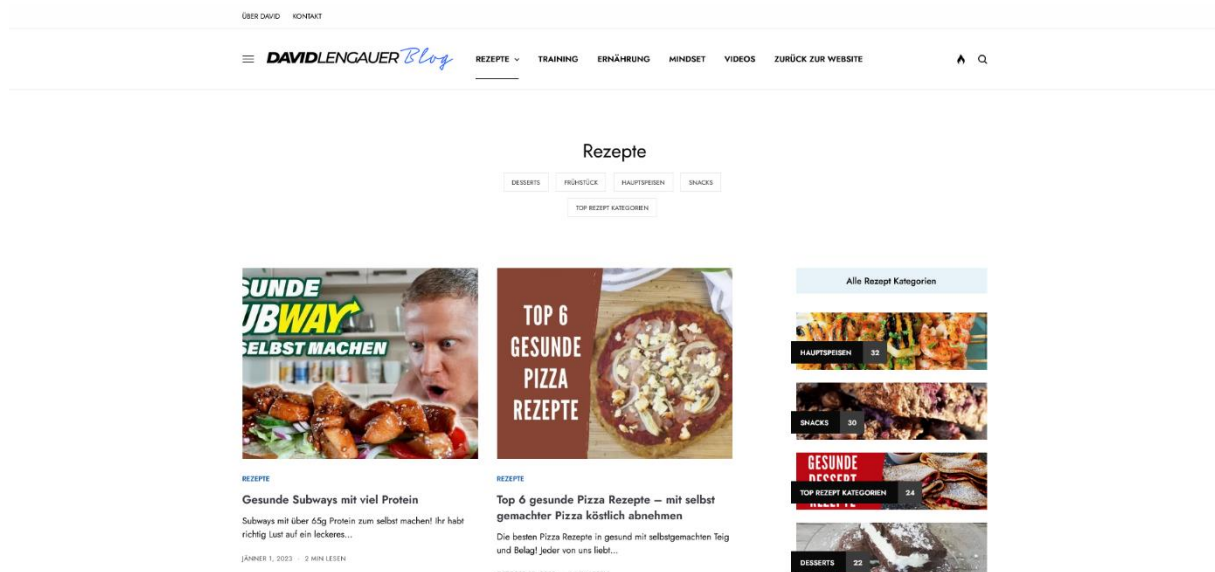

Recipes
name
ingredients
cooking_time
difficulty
description
creator

For the Recipes model, I will add the attribute “pic” in order to allow users to upload a recipe picture. I will also delete the difficulty attribute in the Recipes model since the difficulty gets calculated automatically when opening the recipe detail’s view. The users model already has an attribute “profile_picture” which is not implemented yet. I will implement this as well in order to allow the user upload a profile picture.

Frontend Inspirations

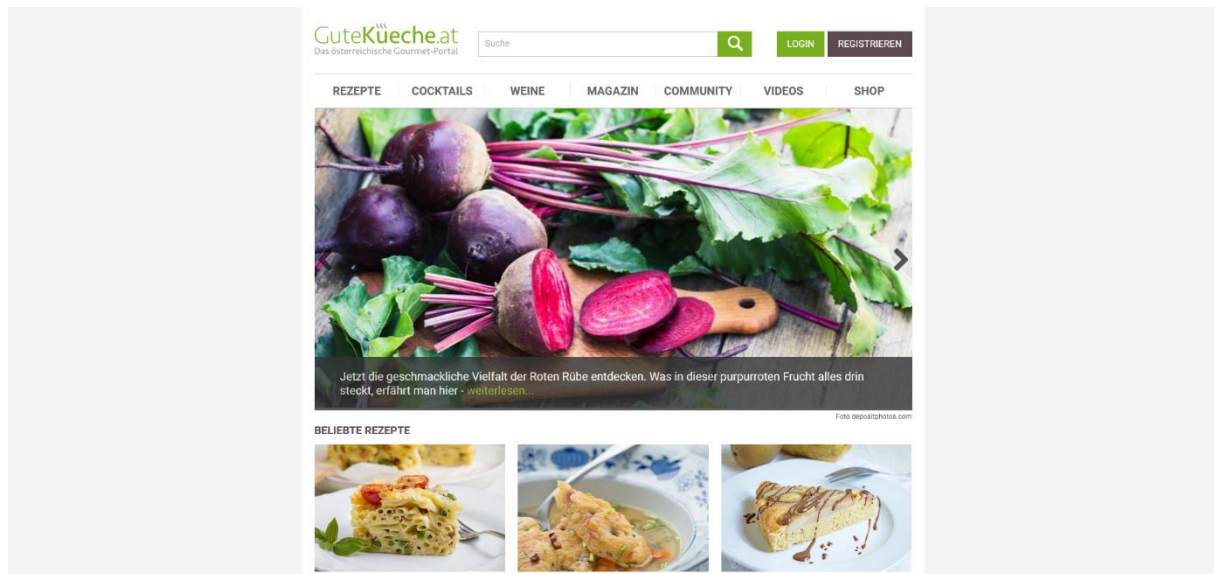

First inspiration is David Lengauer Blog: <https://blog.davidlengauer.com/category/rezepte/>

I like this site because it offers a lot of fitness recipes that are easy to cook.

Second inspiration is GuteKüche.at: <https://www.gutekueche.at/>

I like this one because here you can find everything. They offer a wide range of recipes and you find anything you want.

Third inspiration: <https://www.lecker.de/>

I like it, because it is simple and clean and looks very nice.
